To whomsoever it may concern

It is my pleasure to recommend Miss Sania Bandekar for computer science Bachelor program. I have known her for the past three years and she has been very inclined towards the research based projects. Her project on smile recognition using computer vision is to be appreciated as the machine learning model acknowledged human sentiment. Her work on cutting-edge technology was safe, caring and interactive. Using smile as the recognition tool the project shows how A.I. can be used in the best interest of the people.

She has excellent communication skills. Her technical papers are very clear and concise. It is her curiosity to learn in abundance that she developed project in different disciplines of engineering. However, she has an incline towards learning A.I. and computer science.

Early interest in engineering helped her gain industry experience. She is exceptionally good with hands-on practical and projects. She is well distinguished as she believes in project based learning. She builds everything from scratch. Instructions given to her are followed and she does her project very systematically. Consistency in the tests show that she is great with the module. She follows safety measures during her hands-on experience.

Her affordable and innovative ways of building a project leave us surprised as to how she picks up everything at an early stage. She is self-driven and completes her projects on time. Her projects are an expression of what she really is.

She is a flexible and open-minded individual. Despite of being an Electronics and Telecommunication Diploma engineer she went out of the way to learn master data science by doing projects and assignments. Thereby, she is equally good at hardware and software.
